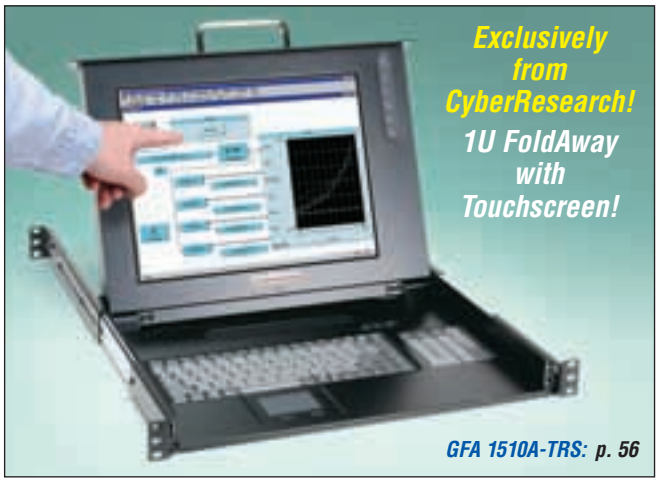
Specification Search Quickly Finds the FoldAway / Keyboard You Need

Select Features such as Screen Size, Brightness, Pointing Device, and Connector Type



CyberResearch offers a complete family of combination keyboards and displays, as well as industrial-duty rack, panel, desktop, and mobile keyboards. Various models are unsealed, sealed, and even immersible!.

To help you select the keyboard that best meets your needs, we have built a powerful new Specification Search tool into our website (cyberresearch.com).

Go to cyberresearch.com...

...then choose a product family...

...then select key specifications & click the "GO" button. *It's that easy!*

Specification Search lets you check off the key product performance attributes you need, filtering down to the choices that meet your criteria. As you check off attributes, you see a running total of the number of suitable possibilities. Select "Any" to ignore an attribute; to refine your search, select additional attributes. Press "GO" to quickly display the keyboards that meet your specifications — then scroll down. For a side-by-side comparison, use the check-box next to two or three keyboards to select them and hit "Compare."

To get to Specification Search, just choose "Keyboards" from the pull-down menu on the cyberresearch.com home page (see illustration below, left).

If you need a rack-mount keyboard/monitor combination, click on "FoldAway™ Monitors + Keyboards." These units combine a monitor, keyboard, and pointing device in just 1U of rack height. Some models have a KVM switch, too. Stand-alone KVM switches can be found on pages 15 and 132.

For FREE technical assistance, call our applications engineers at 1-800-341-2525, or click the "Live Help" icon that appears on each screen of our website to chat with them on line.

Mounting

We offer rack-mount, panel-mount, and desktop/benchtop keyboards. Rack-mount models mount in an EIA 19" rack; panel-mount keyboards are generally water-resistant models that drop into or bolt onto a control panel; and desktop models are suitable for most industrial or hazardous environments.

Key Feedback

Full-travel keys are the most common, ideal for heavy data entry, but hard to seal against liquids and dust. Short-travel touch-typing keyboards are commonly found in notebook PCs.

Short-travel silicone-rubber keys also provide tactile feedback, but all the keys are on a single sealed surface. Designed for hazardous environments, silicone keyboards protect internal electronics against contaminants.

Minimal travel keyboards are easy to clean, with a nearly flat surface.

Protection

For simplicity, we have divided our keyboards into those that have protection against dust and moisture, and those that do not. Select the "Water Resistant (NEMA 4/12, IP65)" option to show only models for hazardous locations.

Pointing Device

Using a mouse with your industrial PC can be awkward, so most of our keyboards have pointing devices built right in. Select the pointing devices you prefer to narrow your search — you can choose an integrated touchpad, trackball, or mouse-button pointing device.

Our OIX 5000 series includes models with sealed trackballs. They are NEMA 4 when the trackball is stationary, NEMA 12 when it's moving.

Connectors

5-pin DIN and PS/2 connectors use separate connectors for the keyboard and the pointing device. USB models combine both signals on one connector.

Many models have adapters to other connector styles. For example, PS/2 connectors could be converted to 5-pin DIN or DB-9. Visit our website for other cable extenders and adapters.

Save Money

When you purchase a keyboard with a PC system from CyberResearch, just ask and we'll deduct $45 from the price of the keyboard. We also offer quantity discounts on all of our products — order five keyboards and save 5%, order 10 and save 10% (must ship at the same time).

Specialized Design & Custom Features

If Specification Search does not find the special features you need, call us. For example, we designed and built a FoldAway with standard keyboard and monitor to fit a 15" wide mounting space.

1U Dual-Rail 17" LCD FoldAway™ with 8- or 16-Port KVM Option

NEW!
17"
with optional
8- or 16-port
KVM
GFC 1708DA
with 8-port KVM
shown here.
Non-KVM and
16-port KVM versions
also available;
see ordering information
box below for details.
Easy-access rear I/O ports!
GFC 17xxD units cut down on setup time and minimize cable clutter by compositing KVM signals through one specialized HD15 connector and unique KVM cables!
GFC 1708DA
rear view
Independent
Dual-Rail System!
GFC 17xxD models utilize a unique independent dual-rail system that allows the display to be pulled out from the rack either in tandem or separately from the keyboard. When the keyboard is not in use, you can slide it back into the rack — no more bumping into an extended keyboard in a narrow server room! The display can be left in place to monitor your application's progress or slid back into the rack when it is no longer needed.

Key Specifications (see our website for complete details)

GFC 17xxD FoldAways
